Subject: Community Concern re: GCPT Testing

All,

One of the main concerns voiced last night was the manner in which the PRP is establishing a “clean line” for locating a position for the potential isolation barrier.

As the GCPT testing “steps out” south from OU1 towards the Bridgeton landfill to establish a “clean line,” the community is very concerned that we are not planning to test the entire area between OU1 and the Bridgeton landfill, potentially missing any rad material south of where the isolation barrier may go, resulting in unprotected rad material potentially being exposed to the SSE from the Bridgeton landfill.

They would like to see the sampling continue all the way to the Bridgeton landfill to ensure that we have a complete and accurate picture of what is contained in the wastes. This concern was magnified by the preliminary GCPT testing.
